

Online - 7 (C1/C2) Divide and Conquer

Duration: 45 minutes

Inversions in an array indicate how far (or close) the array is from being sorted. For an array of integers, an inversion is defined as a pair of indices (i, j) such that:

- $i < j$
- $array[i] > array[j]$

Goal: Write an algorithm to count the total number of inversions in a given array.

Input	Output
1 4 2 3 5	2
2 4 1 3 5	3
