

January 2024, CSE 106
Online on Dynamic Programming (B1/B2)
Time: 40 Minutes

Given two strings, X and Y, your task is to find the minimum number of operations required to convert X to Y.

You have the following three operations permitted on a word:

- Insert a character
- Delete a character
- Replace a character

Design and implement an efficient solution using dynamic programming to determine the minimum number of operations required to convert X to Y.

Input / Output: The input will contain two strings, X and Y, respectively. Your program should print the minimum number of operations required to convert X to Y using the permitted operations.

Sample Input	Sample Output
horse ros	3
intention execution	5

Submission Guidelines: Save your .cpp file as 2205<3-digit-Student-ID>.cpp and upload it on Moodle in the corresponding submission link.
