

January 2024, CSE 106
Online on Binary Search Tree (C1/C2)
Time: 40 Minutes

Problem Specification: Implement the following function.

```
int countInRange(Node* node, int start, int end)
```

Here, `node` is the root node of a BST. The function returns the number of nodes in the sub-tree rooted at `node` whose values are in the range `[start, end]`.

Input/Output Format: The input-output format is similar to the one described in *Assignment 4: Binary Search Tree*. In addition, the *count-in-range* query will start with C followed by two integers. A modified `main.cpp` is uploaded to evaluate your solution.

In the tree above, the sample inputs and outputs are shown below.

Sample Inputs	Sample Outputs
C 7 10	3
C 2 8	3
C 1 2	0

Submission Guidelines: Save your `.cpp` file as `2205<3-digit-Student-ID>.cpp` and upload it on Moodle in the corresponding submission link.
